# NORTHWIND Traders Sales Analysis

- BY ALOK SARKAR

## TOPICS

- Project Overview
- Information about Dataset tables
- Data cleaning and Transformation
- MECE-Breakdown
- Solving Power Bi and EDA Questions
- Conclusion

#### **Overview**

Objective: The objective of this project is to develop a detailed Power BI dashboard using the Sample Northwind Traders Database. This dashboard will provide critical insights into various aspects of the business, including product sales performance, customer behavior, order trends, and supplier performance. These insights will facilitate data-driven decision-making and support strategic planning efforts.

Analysis Scope: The analysis will focus on multiple dimensions of the business, including customer segments, sales and order trends, employee performance, product distribution across various countries, and supplier performance. It will encompass historical sales data, customer data, product information, and supplier data from multiple stores.

Goal: The primary goal of this Power BI dashboard is to provide a comprehensive view of the Northwind Traders sales operations. It will deliver actionable insights to optimize product sales, enhance customer relationships, improve distribution strategies, and identify opportunities for growth and efficiency.

Insights & Recommendations: The Power BI dashboard will generate valuable insights into top-selling products, customer retention, and sales trends over time across various countries. It will analyze the performance of different regions, identify bestselling product categories, and evaluate supplier performance based on sales data. Additionally, it will provide recommendations for enhancing product sales across countries and improving customer engagement.

Report & Presentation: The final deliverable will consist of a detailed report describing the data sources, data modeling methodologies, and data cleansing processes used in creating the Power BI dashboard. The report will also include a step-by-step guide on how to interpret the insights and use the dashboard for decision-making. The presentation will showcase the key findings, visualizations, and actionable recommendations derived from the dashboard's analysis.

#### Information about dataset

- Customers: This table contains information about customers, including their company details, contact information, and location.
- **Employees:** This table stores employee details like name, title, contact information, and hire date.
- Orders: this table captures order details such as order ID, customer ID, date, items ordered, shipping information, and freight costs.
- Order details: This table provides a breakdown of each order, including specific products ordered, their quantity, and unit price.
- **Products:** This table showcases product information like name, category, unit price, stock levels, and supplier details.
- **Suppliers:** This table contains information about the company's suppliers, including their contact details and location.
- **Shippers:** This table lists the shipping companies utilized by north wind traders, along with their contact information.
- **Categories:** This table categorizes the products offered by north wind traders.

# Data Cleaning and Transformation

- ☐ Remove unnecessary columns.
- Eliminate columns with a high percentage of null values.
- Eliminate rows with a Lowe percentage of null values.
- Merge columns to create new ones, such as combining first and last names into a full name.
- Correct data types as needed.

## MECE BREAKDOWN

		Customer Demographics	Customer Purchase	Behaviour		Customer Lifetime Value	
Customer Analysis		Segment customers based on demographics (age, gender, location).	Analyze purchasing popreferences. Evaluate volume of purchases.			Calculate the lifetime value of different customer segments.

#### Explanation

**Customer Analysis** 

Analyzes the demographic attributes of customers such as age, gender, income, and location. It helps in understanding the customer base and tailoring marketing strategies.

**Order Analysis** 

This involves analyzing the specifics of each order, including quantities, prices, and any applied discounts. It helps in understanding the granular details of sales transactions.

**Employee Analysis** 

This process includes assessing work quality, productivity, and alignment with organizational goals, ultimately guiding decisions on development, promotions, and training needs.

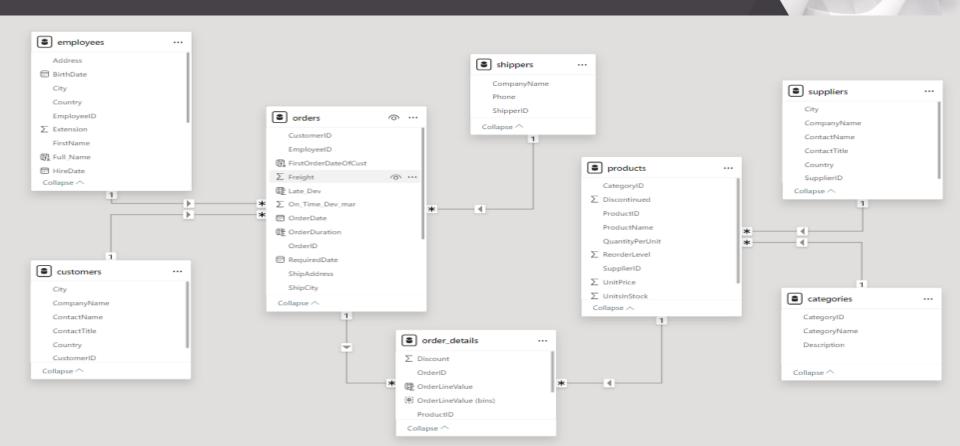

**Product Analysis** 

Examines customer feedback on products, including ratings and reviews. It helps in understanding product performance from the customer's perspective.

**Supplier Analysis** 

Assesses the reliability and efficiency of suppliers based on ratings and performance metrics. It helps in managing supplier relationships and ensuring supply chain effectiveness.

## **ER** Diagram

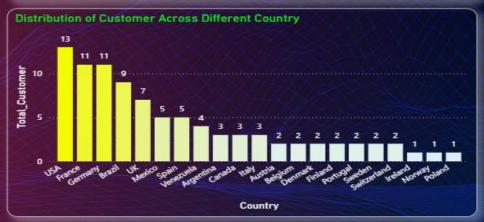

# Power BI Problem Statement

#### **Customer Analysis**

## How does customer distribution vary across different regions or customer segments?

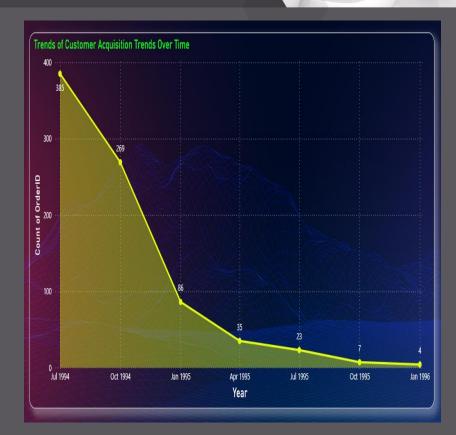

The customer distribution indicates that the company has a strong presence in Europe, particularly in France, Germany, and the UK. North America, led by the USA, also shows significant customer numbers. There are opportunities to enhance customer engagement and expand the customer base in regions with lower counts, such as some European countries and South American countries.

#### What is the trend in customer acquisition over time?

The trend in customer acquisition shows a significant decline from 1994 to early 1996. While the company experienced strong initial growth in 1994, it faced challenges in maintaining this momentum in subsequent quarters. This downward trend suggests a need to investigate and address potential causes, such as changes in market conditions, customer preferences, or internal factors affecting sales and marketing effectiveness.

Can we visualize the distribution of customer demographics such as age, gender, or income using histograms or pie charts?

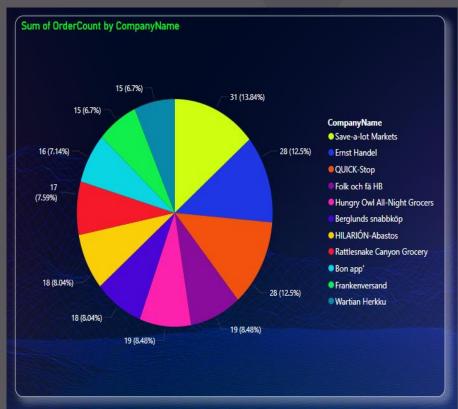

For this question we don't have data in our data set. If we want to solve this problem we need age, gender or income of customer from customer table

So I Create a own question.

Top 10 customers by order count.

 The top 10 customers by order count show a diverse range of companies with varying levels of engagement. Save-a-lot Markets stands out as the most active customer, followed by Ernst Handel and QUICK-Stop.
 The order counts reflect strong relationships and repeat business from these key customers, which are crucial for the company's sales stability and growth.

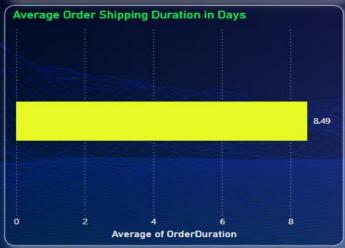

## **Order Analysis**

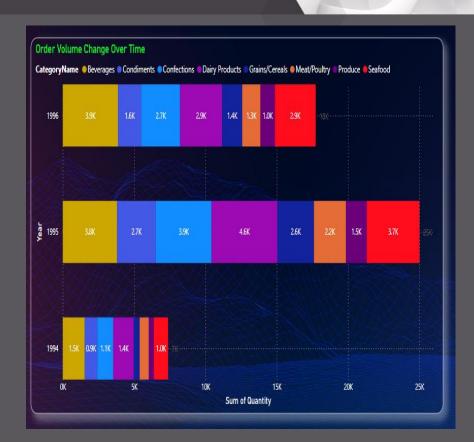

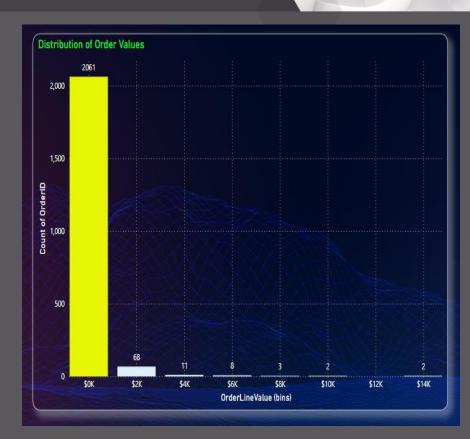

#### How does order volume change over time?

 The overall order volume for the company increased significantly from 1994 to 1995, with 1995 being the peak year for most product categories. However, there is a slight decline in order volume in 1996 compared to 1995, though it remains higher than 1994. This trend suggests that the company experienced rapid growth in 1995, followed by a stabilization or slight reduction in order volume in the following year.

#### What is the distribution of order values?

• The distribution of order values is highly skewed towards lower value orders, with the majority of orders falling below 2000. There is a sharp decline in the number of orders as the order value increases. High value orders are very rare, suggesting that large purchases are uncommon.

Can we visualize the average order processing time or shipping duration time?

 The average shipping duration time of 8.49 days can provide valuable insights into the efficiency of the order processing and shipping process. Using appropriate visualization techniques, stakeholders can easily identify areas for improvement and track changes over time.

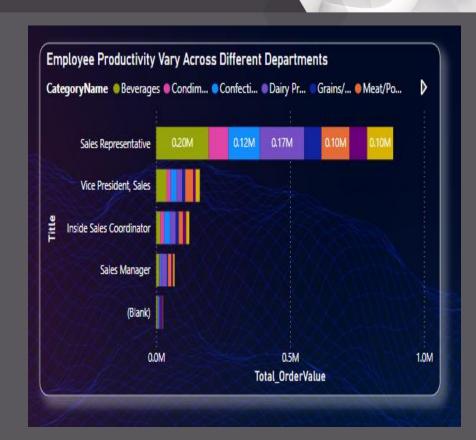

## **Employee Analysis**

# How does employee productivity vary across different departments or job roles?

Employee productivity varies significantly across different job roles. **Sales Representatives** are the most productive in terms of both quantity and value, indicating their crucial role in driving sales. The Vice President, Sales handles fewer orders but contributes high-value transactions. Inside Sales **Coordinators** have balanced productivity, while **Sales Managers** show the lowest productivity in terms of both quantity and value.

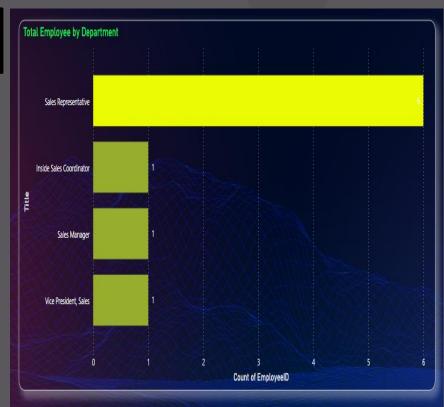

What is the distribution of employee tenure? For this question we don't have data in our data set. If we want to solve this problem we need tenure or last date of joining in the company of employee

So I Create a own question.

How dose employee distribution by job tittle

The employee distribution by job title shows that the company employs a significantly higher number of Sales Representatives compared to other roles. With 6 out of 9 employees, Sales Representatives form the core of the sales team. In contrast, the roles of Inside Sales Coordinator, Sales Manager, and Vice President, Sales each have only one employee, indicating specialized roles with unique responsibilities.

Can we visualize employee performance ratings or KPIs using a radar chart or bullet graph? For this question we don't have data in our data set. If we want to solve this problem we need employee's rating or feedback data.

So I Create a own question.

How many sales has each employee?

 The distribution of sales among employees varies significantly, with some employees contributing substantially more to the total sales value than others.
 Margaret Peacock stands out as the highest contributor, followed by Janet Leverling and Nancy Davolio. The data indicates that sales performance is not evenly distributed among employees.

## **Product Analysis**

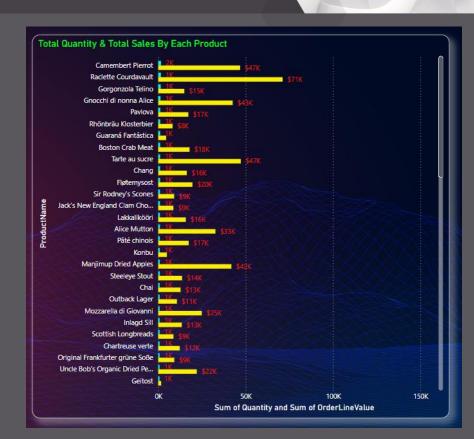

What is the distribution of product ratings or reviews? For this question we don't have data in our data set. If we want to solve this problem we need product ratings or reviews or feedback data.

So I Create a own question.

How much each product quantity and sales

 The data shows that Côte de Blaye is the top-selling product by sales value, while Camembert Pierrot has the highest quantity sold. Most products maintain a consistent quantity of 1k, but their sales values vary significantly, indicating differences in pricing or demand.

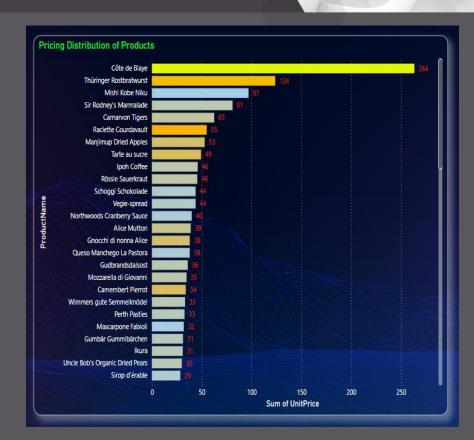

How does the sales volume vary across different product categories?

 The sales volume varies significantly across different product categories, with Beverages leading in total order value. Dairy Products, Confections, and Meat/Poultry are also strong contributors to the overall sales. In contrast, Grains/Cereals and Produce have lower sales volumes compared to other categories.

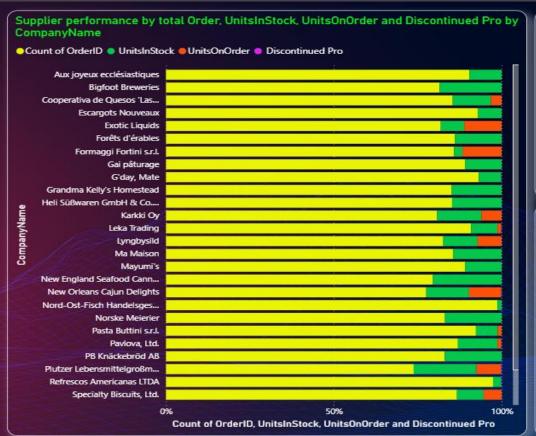

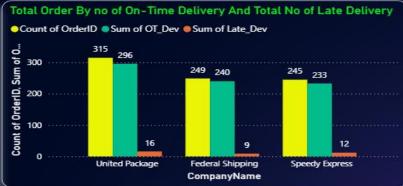

#### Can we visualize the pricing distribution of products?

The pricing distribution of products shows significant variability across the range. The prices vary widely, with a minimum of \$2.50 and a maximum of \$263.50, indicating a broad price range of \$261.00. The mean price is approximately \$33.75, but this is skewed upwards by a few high-priced items. The median price is about \$21.05, suggesting that more than half of the products are priced below this amount, with many clustered in the lower to mid-price range. The high standard deviation of approximately \$45.85 reflects considerable variability in prices. Overall, while most products are priced affordably, the presence of a few premium items results in a diverse pricing structure.

## Supplier Analysis

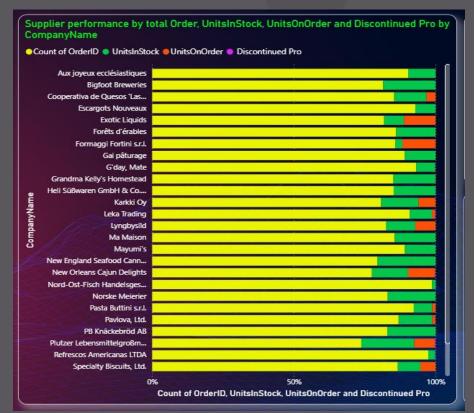

What is the distribution of supplier ratings or performance metrics? For this question we don't have data in our data set. If we want to solve this problem we need supplier ratings or reviews or feedback data.

How dose the performance of various supplier company very?

The pricing distribution shows significant variation in inventory and ordering across companies. Svensk Sjöföda AB has the highest stock with 224 units, while Nord-Ost-Fisch Handelsgesellschaft mbH has the lowest with 10 units. Exotic Liquids has the largest order volume of 110 units, whereas several companies have none. Discontinued products are minimal, affecting only 8 items in total.

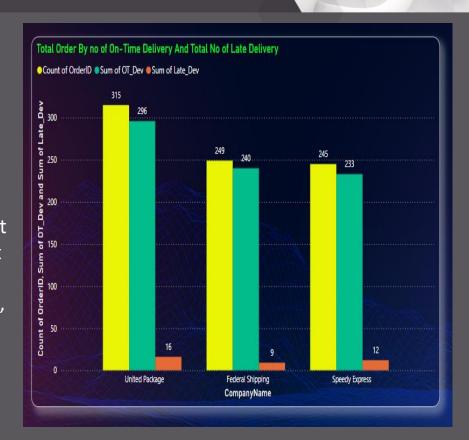

How does the cost or pricing structure vary across different suppliers?

For this question we don't have data in our data set. If we want to solve this problem we need supplier pricing structure data.

# What is the distribution of supplier delivery performance ?

The pricing distribution of products indicates a notable variance in delivery metrics across companies. United Package has the highest Sum of OT Dev with 296, suggesting frequent pricing deviations, while **Federal Shipping** has the lowest with 240. **United Package** also shows the highest **Sum of Late Dev** at 16, indicating more late deliveries compared to other companies. Overall, **Federal Shipping** has the lowest deviation and late delivery figures, suggesting more consistent pricing and delivery performance.

# Can we visualize the geographical distribution of suppliers using a map or bubble chart?

The pricing distribution of products across countries shows that the **USA** has the highest number of suppliers with 4, indicating a significant presence in the market. **France** and Germany each have 3 suppliers, reflecting strong representation in those regions. Other countries like Australia, Canada, Italy, Japan, and Sweden each have 2 suppliers. Several countries, including Brazil, Denmark, Finland, Netherlands, Norway, Singapore, Spain, and the **UK**, have 1 supplier each. Overall, the distribution is varied, with the USA leading in supplier count.

# EDA Problem Statement

#### **EDA Questions**

- 1. What are the key factors influencing customer retention or loyalty based on the dataset?
- 2. How do customer preferences vary based on their location or demographics? Can we explore this through interactive visualizations?
- 3. Are there any interesting patterns or clusters in customer behavior that can be visualized to identify potential market segments?
- 4. Are there any specific product categories or SKUs that contribute significantly to order revenue? Can we identify them through visualizations?
- 5. Are there any correlations between order size and customer demographics or product categories? Can we explore this visually using scatter plots or heatmaps?
- 6. How does order frequency vary across different customer segments? Can we visualize this using bar charts or tree maps?

- 7. Are there any correlations between employee satisfaction levels and key performance indicators? Can we explore this visually through scatter plots or line charts?
- 8. How does employee turnover vary across different departments or job roles? Can we visualize this using bar charts or heatmaps?
- 9. Can we identify any patterns or clusters in employee skill sets or qualifications through visualizations? How can this information be used for talent management?
- 10. Are there any correlations between product attributes (e.g., size, color, features) and sales performance? Can we explore this visually using scatter plots or heatmaps?
- 11. How does product demand fluctuate over different seasons or months? Can we visualize this through line charts or area charts?

- 12. Can we identify any outliers or anomalies in product performance or sales using visualizations? How can this information be used for product optimization?
- 13. Are there any correlations between supplier attributes (e.g., location, size, industry) and performance metrics (e.g., on-time delivery, product quality)? Can we explore this visually through scatter plots or heatmaps?
- 14. How does supplier performance vary across different product categories or departments? Can we visualize this using stacked bar charts or grouped column charts?
- 15. Can we identify any trends or patterns in supplier costs or pricing structures through visualizations? How can this information be used for procurement optimization?

#### CONCLUSION:

#### Key Findings:

Customer Retention Period: The retention period for customers varies widely, ranging from 0 months to 34 months.

Number of Late Deliveries: Only a small percentage of customers (1.6%) have experienced late deliveries.

Most Preferred Products: Customers have a diverse range of most preferred products, with no single product standing out as a clear favorite.

Number of Orders: The number of orders placed by customers also varies widely, with some customers placing only one order and others placing up to 102 orders. Insights:

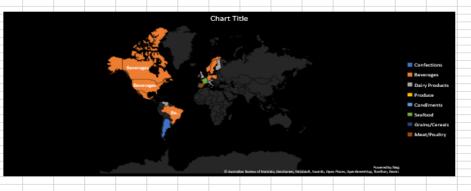

Focus on On-Time Delivery: While only a small percentage of customers have experienced late deliveries, it is essential to maintain a high level of on-time delivery to ensure customer satisfaction and retention.

Personalized Product Recommendations: Given the wide variety of most preferred products, it is important to offer personalized product recommendations based on each customer's purchase history. Customer Segmentation: Given the wide range in the number of orders placed by customers, it may be beneficial to segment customers based on their purchasing behavior and develop targeted marketing strategies for each segment.

Monitor Customer Retention: Given the wide range in the retention period for customers, it is important to monitor customer retention and develop strategies to retain customers for longer periods.

How do customer preferences vary based on their location or demographics? Can we explore this through interactive visualizations?

#### CONCLUSION:-

**Beverages are popular globally:** Beverages are among the top 3 categories in terms of value purchased in most countries, including Argentina, Austria,

Brazil, Canada, Denmark, France, Germany, Ireland, Italy, Mexico, Norway, Poland, Portugal, Spain, Sweden, Switzerland, UK, and USA.

Dairy Products are favored in Europe: Dairy Products are a top category in many European countries, including Austria, Belgium, Denmark, Finland,

France, Germany, Ireland, Italy, Norway, Poland, Portugal, Spain, Sweden, and Switzerland.

Confections are popular in the Americas: Confections are a top category in several countries in the Americas, including Argentina, Brazil, Canada,

Mexico, USA, and Venezuela.

Seafood is popular in coastal countries: Seafood is a top category in countries with a significant coastline, such as Argentina, Brazil, Canada,

Denmark, France, Germany, Ireland, Norway, Portugal, Spain, Sweden, and USA.

**Meat/Poultry and Grains/Cereals:** show significant value in some countries, such as Spain and Portugal.

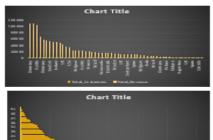

#### Are there any interesting patterns or clusters in customer behavior that can be visualized to identify potential market segments?

#### CONCLUSION:-

#### High Revenue Generating Countries and Favorite Categories:

Germany: Generates the highest revenue with 110277.305 in Beverages. Also notable for Dairy Products and

USA: Close second in revenue with 109729.39 in Seafood. Has significant contributions from Dairy Products, Beverages, and Confections.

Austria: High revenue with 104874.9785, predominantly in Dairy Products.

Brazil: 68734.6175 in Beverages but also contributes to Condiments.

#### Diverse Category Preferences:

Germany: Not limited to one category, significant revenue from Beverages, Dairy Products, and Confections. USA: Similarly diverse, with high contributions from Seafood, Dairy Products, Beverages, Confections, and Meat/Poultry.

France: Revenue spread across Seafood, Dairy Products, Beverages, and Confections.

#### Specialized Markets:

Sweden: High revenue in Beverages with 54495.14.

Ireland: Significant in Seafood with 49979.905.

Venezuela: Predominantly Beverages and Confections.

Finland: Focused on Dairy Products.

#### Smaller Markets with Unique Preferences:

Portugal: Significant revenue in Condiments.

Norway: Focus on Beverages.

Argentina: Revenue from Dairy Products and Confections.

#### Low Revenue Markets:

Poland, Argentina, Finland, Canada, and Mexico: Lower revenue figures with specific category preferences.

#### Potential Market Segments:

High Revenue, Diverse Preferences: Germany, USA, France

High Revenue, Specialized Preferences: Austria (Dairy Products), Brazil (Beverages)

Moderate Revenue, Specialized Preferences: Sweden (Beverages), Ireland (Seafood), Venezuela (Beverages, Confections)

Small Markets, Unique Preferences: Portugal (Condiments), Norway (Beverages)

Low Revenue Markets: Poland, Argentina, Finland, Canada, Mexico

Are there any specific product categories or SKUs that contribute significantly to order revenue? Can we identify them through visualizations?

#### CONCLUSION:-

#### Key findings:

Top 3 categories: Beverages, Dairy Products, and Confections are the top 3 categories that contribute the most to order revenue, accounting for approximately 52.9% of the total revenue.

- Beverages lead with the highest revenue, totaling \$267,868.18, which constitutes about 21.16% of the total revenue.
- 2. Dairy Products follow with \$234,507.29, making up 18.53% of the total revenue.
- Meat/Poultry and Seafood are also significant contributors to order revenue, accounting for 12.9% and 10.4% of the total revenue, respectively.

#### **Business insights:**

- Focus on top categories: The company should focus on the top 3 categories (Beverages, Dairy Products, and Confections) to maximize revenue growth.
- Optimize product offerings: The company should optimize its product offerings in the top categories to meet customer demand and increase revenue.
- 3. Monitor and adjust: The company should continuously monitor the revenue contribution of each product category and adjust its strategies accordingly to ensure maximum revenue growth.

	Ownar	Tomis Sp	Carmarly	-	-t, rra. 14

#### CONCLUSION:-

Based on the return data we have to conclude that

#### Key findings:

- Order size distribution: The order size distribution is skewed, with a
  few customers having very large order sizes (above \$100,000) and
  many customers having smaller order sizes (below \$10,000).
   Country-wise order size: Customers from Germany, USA, and
  Austria have the largest average order sizes, while customers from
  Argentina, Mexico, and Venezuela have smaller average order sizes.
- Company-wise order size: Some companies, such as QUICK-Stop, Ernst Handel, and Save-a-lot Markets, have very large order sizes, while others, such as Lazy K Kountry Store and Centro comercial Moctezuma, have very small order sizes.

#### Business insights:

- Target high-value customers: The company should focus on targeting customers with large order sizes, such as those from Germany, USA, and Austria, to maximize revenue growth.
- Optimize product offerings: The company should optimize its product offerings to meet the needs of customers with large order sizes, such as
- QUICK-Stop and Ernst Handel.
- Improve customer relationships: The company should improve its customer relationships with companies that have smaller order sizes, such as Lazy K Kountry Store and Centro comercial Moctezuma, to increase revenue growth.

How does order frequency vary across different customer segments? Can we visualize this using bar charts or treemaps?

		Marketing Assistant	Order S	
Owner	Accounting Manager	Sales Agent	Adm A	

#### CONCLUSION:-

#### Key findings:

- Order frequency distribution: The order frequency is highest for Sales Representatives, followed by Owners, Sales Managers, and Accounting Managers.
- 2. Customer segment hierarchy: The customer segments can be grouped into three categories: Sales-related (Sales Representative, Sales Manager, Sales Associate, Sales Agent, Assistant Sales Representative, Assistant Sales Agent), Management-related (Owner, Accounting Manager), and Marketing-related (Marketing Manager, Marketing Assistant, Owner/Marketing Assistant).
- 3. Order frequency variation: The order frequency varies significantly across different customer segments, with Sales Representatives having more than twice the order frequency of Owners, and Owners having more than twice the order frequency of Marketing Managers.

#### Business insights:

- Target high-frequency segments: The company should focus on targeting customer segments with high order frequencies, such as Sales Representatives and Owners, to maximize revenue growth.
- 2. Optimize marketing strategies: The company should optimize its marketing strategies to target customer segments with lower order frequencies, such as Marketing Managers and Marketing Assistants, to increase revenue growth.
- 3. Improve customer relationships: The company should improve its customer relationships with customer segments that have lower order frequencies, such as Order Administrators and Assistant Sales Agents, to increase revenue growth.

Are there any correlations between employee satisfaction levels and key performance indicators? Can we explore this visually through scatter plots or line charts? We don't have data for employee satisfaction. For this question we need employees satisfaction review or feedback report then we can slove this. For unavailable data we could't slove the question that's why I create a question by own that is. Que- How does order frequency vary across different employee Employeel - EmployeeNam - Total Sales -SELECT Chart Title 4 Margaret Peacock S e.EmployeeID. 11,346,14 3 Janet Leverling \$ CONCAT(e.FirstName, ' ', e.LastName) AS 10.884.74 EmployeeName. 1 Nancy Davolio S 8,836,64 SUM(o.Freight) AS Total Sales 2 Andrew Fuller S 8,696,41 Manuset Peacock FROM 8 Laura Callahan S 7.487.88 Janet Leverling orders o 7 Robert King \$ 6.665.44 Mancy Davolio JOIN employees e ON a.EmployeeID = e.EmployeeID 5 Steven Buchanan S 3,918.71 Andrew Fuller GROUP BY 6 Michael Suvama S 3.780.47 Laura Callahan e.EmployeeID, CONCAT(e.FirstName, ' ', e.LastName) 9 Anne Dodsworth S 3,326,26 ORDER BY Robert King TotalSales DESC: Steven Buchman Michael Suverna Anne Dodrworth Conclusion: The analysis of order frequency across different employees reveals significant variations in their sales performance, highlighting opportunities for improvement and growth. Key Findings: Top Performing Employees: The results show that certain employees generate significantly higher total sales than others. Employee Performance Variance: The data indicates substantial differences in sales performance among employees, suggesting differences in their sales strategies, customer engagement, or product knowledge. Insiahts: Identify top-performing employees and recognize their achievements. Analyze performance gaps between employees to target training or coaching for improvement Develop strategies to enhance sales performance and customer engagement

Can we identify any patterns or clusters in employee skill sets or qualifications through visualizations? How can this information be used for talent management?

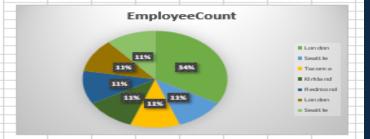

We don't have data for this question. If we want to solve this question so we need employee skill sets or qualifications data

So we create a question by own

Can we identify any patterns or clusters in employee locations (cities or regions) through visualizations? How can this information be used for resource allocation or team management?

				_

#### CONCLUSION:

#### Key Findings:

Job Role Distribution: Sales Representatives are the most common job role, accounting for 71.4% of employees.

Country-wise Distribution: The USA has the highest number of employees, followed by the UK. City-wise Distribution: London is the city with the highest number of employees, followed by Seattle.

Job Role Concentration: Sales Representatives are concentrated in London and the USA.

Business Insights:

Focus on Key Locations: The company should focus on London and Seattle, which are the key locations with the highest number of employees.

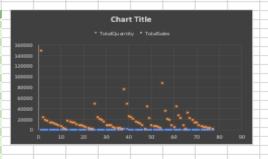

Develop Job Role-Specific Strategies: The company should develop job role-specific strategies to target high-performing job roles, such as Sales Representatives, and improve employee performance within each role

Optimize Resource Allocation: The company should optimize resource allocation to ensure that the right resources are allocated to the right job roles and locations to maximize efficiency and productivity.

Consider Decentralization: The company should consider decentralizing certain job roles, such as Sales Representatives, to improve coverage and reach in different locations.

#### CONCLUSION:-

#### Key findings:

Product Category Performance: Beverages, Confections, and Dairy Products are the top-performing categories in terms of total sales, with Beverages having the highest total sales.

Product Attribute Correlations: There is a correlation between product attributes such as size, color, and features and sales performance, with certain product categories and attributes performing better than others.

Category-Specific Insights: Within each category, there are specific products that perform better than others, such as Côte de Blaye in Beverages and Raclette Courdavault in Dairy Products.

Business insights:

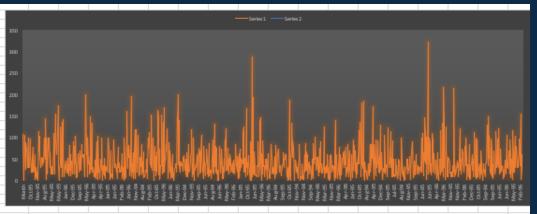

Focus on High-Performing Categories: The company should focus on the topperforming categories, such as Beverages, Confections, and Dairy Products, to maximize revenue growth.

Optimize Product Attributes: The company should optimize product attributes such as size, color, and features to improve sales performance, particularly in categories with lower sales.

Category-Specific Strategies: The company should develop category-specific strategies to target high-performing products and improve sales performance within each category.

How does product demand fluctuate over different seasons or months? Can we visualize this through line charts or area charts?

#### CONCLUSION:-

#### Key findings:

Product Demand Fluctuation: Product demand fluctuates significantly over different months, with some products experiencing high demand in certain months and low demand in others.

Seasonal Trends: There are seasonal trends in product demand, with some products experiencing higher demand in the winter months (e.g., Chai, Glühwein) and others in the summer months (e.g., Sasquatch Ale, Spegesild).

Product-Specific Insights: Certain products, such as Alice Mutton and Côte de Blaye, have consistent demand throughout the year, while others, such as Raclette Courdavault and Manjimup Dried Apples, have spikes in demand during specific months.

#### **Business insights:**

Stock Management: The company should manage its inventory and stock levels based on the fluctuation in product demand, ensuring that high-demand products are always in stock and low-demand products are not overstocked.

Seasonal Promotions: The company should consider running seasonal promotions and marketing campaigns to capitalize on the increased demand for certain products during specific months.

Product-Specific Strategies: The company should develop product-specific strategies to target high-demand products and improve sales performance, such as offering discounts or bundling high-demand products with low-demand products.

Supplier\_Name

Country AverageOrder OneTimeDeliveryR

#### Conclusion:

The analysis of supplier performance across different countries and regions reveals significant variations in their average order sizes and one-time delivery rates, highlighting opportunities for improvement and growth.

#### **Key Findings:**

Top Performing Suppliers: The top 3 suppliers with the highest average order size are:

Aux joyeux ecclésiastiques (France) with an average order size of \$2,846.13

Gai pâturage (France) with an average order size of \$1,123.63

Forêts d'érables (Canada) with an average order size of \$855.38

One-Time Delivery Rate Leaders: The top 3 suppliers with the highest one-time delivery rate are:

PB Knäckebröd AB (Sweden) with a one-time delivery rate of 100%

Escargots Nouveaux (France) with a one-time delivery rate of 100%

Zaanse Snoepfabriek (Netherlands) with a one-time delivery rate of 100%

Country Performance: France has the highest average order size, with two suppliers in the top 3. Germany and Canada also have multiple suppliers with high average order sizes. The USA has a mix of high and low performers.

Regional Clustering: Suppliers from Europe (France, Germany, Italy, and Sweden) tend to have higher average order sizes and one-time delivery rates compared to suppliers from other regions. North America (USA and Canada) has a mix of high and low performers, while Asia (Japan and Singapore) has lower average order sizes and one-time delivery rates.

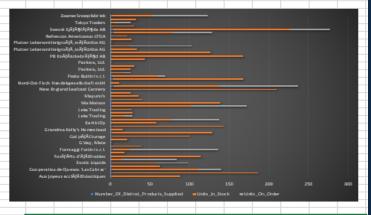

Outliers: Refrescos Americanas LTDA (Brazil) has a significantly lower average order size compared to other suppliers, which may indicate a different business model or product offerings.

#### Insights:

Identify top-performing suppliers and recognize their achievements. Analyze performance gaps between suppliers to target logistics optimization, product offerings, or customer engagement strategies for improvement. Develop strategies to enhance supplier performance and customer satisfaction across the supplier base.

How does supplier performance vary across different product categories or departments? Can we visualize this using stacked bar charts or grouped column charts?

#### CONCLUSION:-

#### Key findings:

Supplier Performance: Supplier performance varies significantly across different product categories, with some suppliers specializing in specific categories and others supplying a wider range of products.

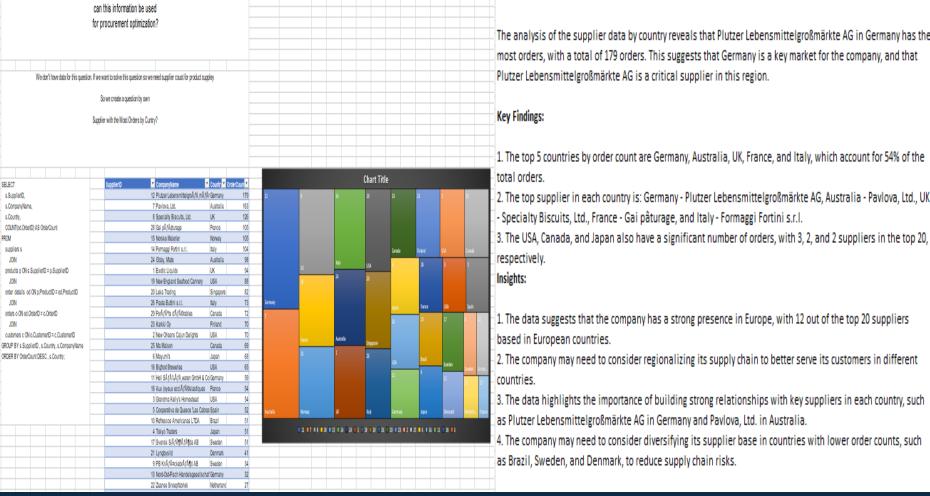

Product Category Distribution: The distribution of product categories varies among suppliers, with some suppliers focusing on a particular category (e.g., Forêts d'érables and Condiments, New Orleans Cajun Delights and Condiments) and others supplying a more diverse range of products.

Units in Stock and On Order: The number of units in stock and on order also varies among suppliers and product categories, indicating potential differences in demand and supply chain management.

#### Business insights:

Supplier Selection: The company should consider supplier performance and product category distribution when selecting suppliers, ensuring that they have a diverse range of products and are reliable in supplying those products.

Supply Chain Management: The company should monitor the number of units in stock and on order for each supplier and product category, ensuring that they have sufficient inventory to meet demand and that they are not overstocking low-demand products. Product Category Strategy: The company should develop a product category strategy that takes into account supplier performance and distribution, ensuring that they are focusing on high-demand and high-margin categories.

Can we identify any trends or patterns in supplier costs or pricing structures through visualizations? How

## Conclusion:

The analysis of the supplier data by country reveals that Plutzer Lebensmittelgroßmärkte AG in Germany has the most orders, with a total of 179 orders. This suggests that Germany is a key market for the company, and that Plutzer Lebensmittelgroßmärkte AG is a critical supplier in this region.

### **Key Findings:**

- 1. The top 5 countries by order count are Germany, Australia, UK, France, and Italy, which account for 54% of the
- 2. The top supplier in each country is: Germany Plutzer Lebensmittelgroßmärkte AG, Australia Paylova, Ltd., UK
- Specialty Biscuits, Ltd., France Gai pâturage, and Italy Formaggi Fortini s.r.l.
- Insights:
- 1. The data suggests that the company has a strong presence in Europe, with 12 out of the top 20 suppliers based in European countries.
- 2. The company may need to consider regionalizing its supply chain to better serve its customers in different countries.
  - 3. The data highlights the importance of building strong relationships with key suppliers in each country, such
- as Plutzer Lebensmittelgroßmärkte AG in Germany and Pavlova, Ltd. in Australia. 4. The company may need to consider diversifying its supplier base in countries with lower order counts, such as Brazil, Sweden, and Denmark, to reduce supply chain risks.

## Conclusion

• By providing a visually compelling and user-friendly dashboard with interactive features, this Power BI report empowers stakeholders at Northwind Traders to make data-driven decisions. This comprehensive analysis of customers, sales, inventory, and employees offers valuable insights into business operations and facilitates data exploration. The expected impact is a transformation in how Northwind interacts with its data, ultimately enhancing competitiveness and driving the company forward in the wholesale market.

# Thank You
